

Design and Development of Box Lift using Digital Twin and Automation Studio - B&R Automation Pvt Ltd

By- Amman Chougale

Linkedin : <https://www.linkedin.com/in/ammanchougale/>

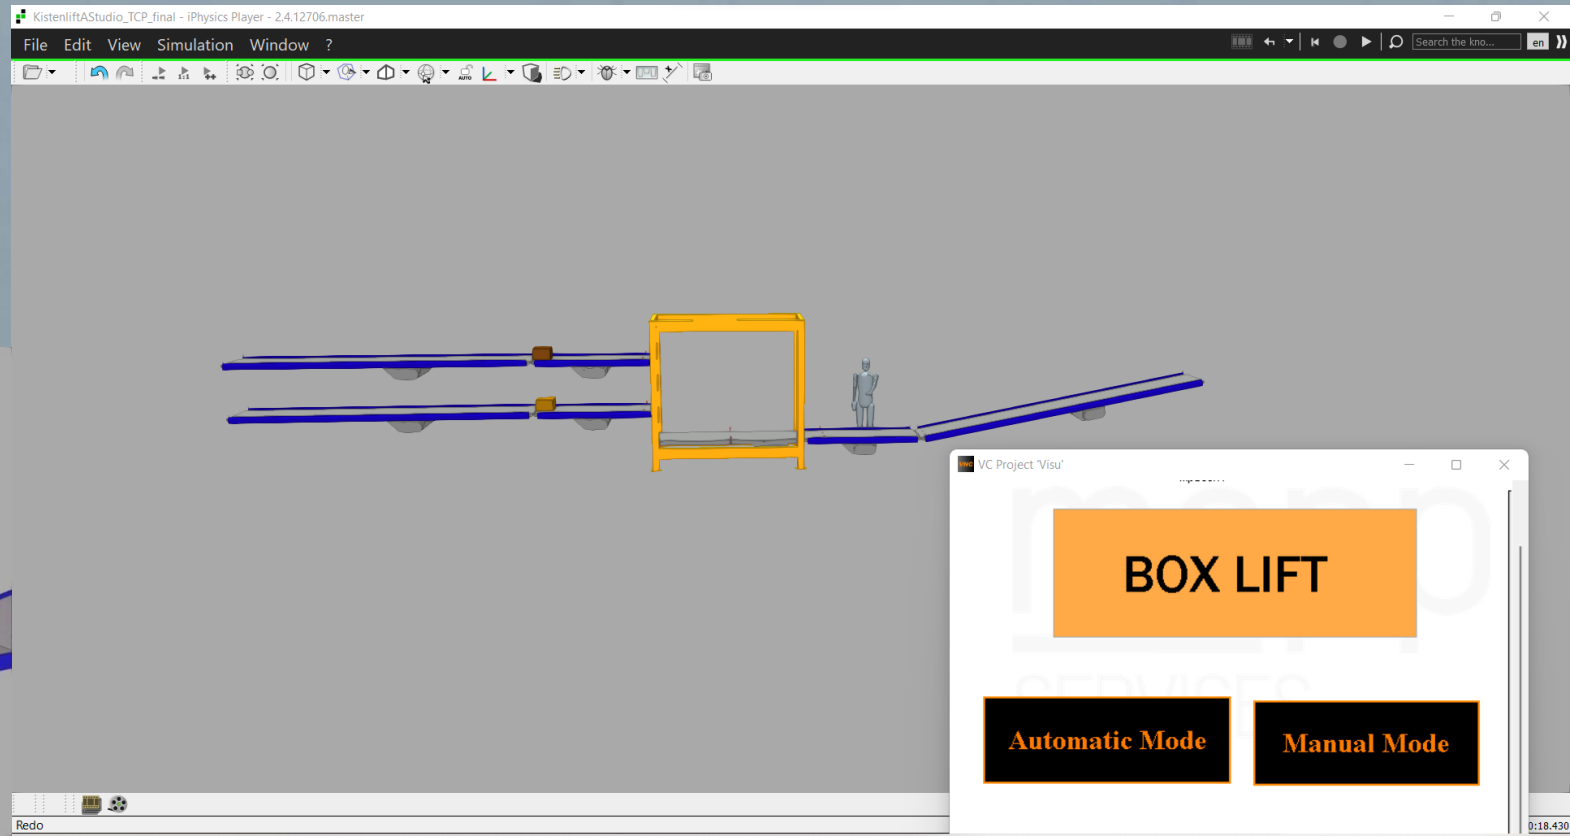

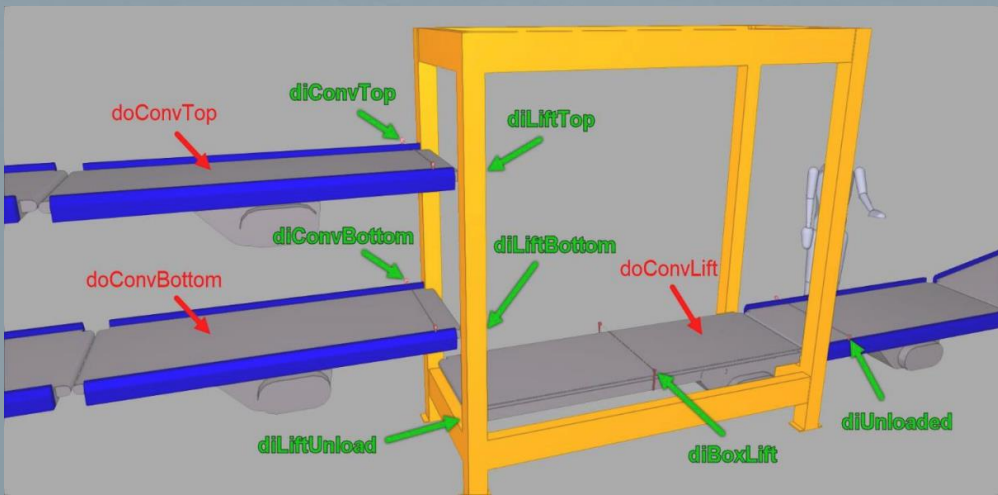

Overview

- ◆ Developed and programmed HMI for a fully automated box lift system.
- ◆ Enhanced workflow efficiency and operational safety.

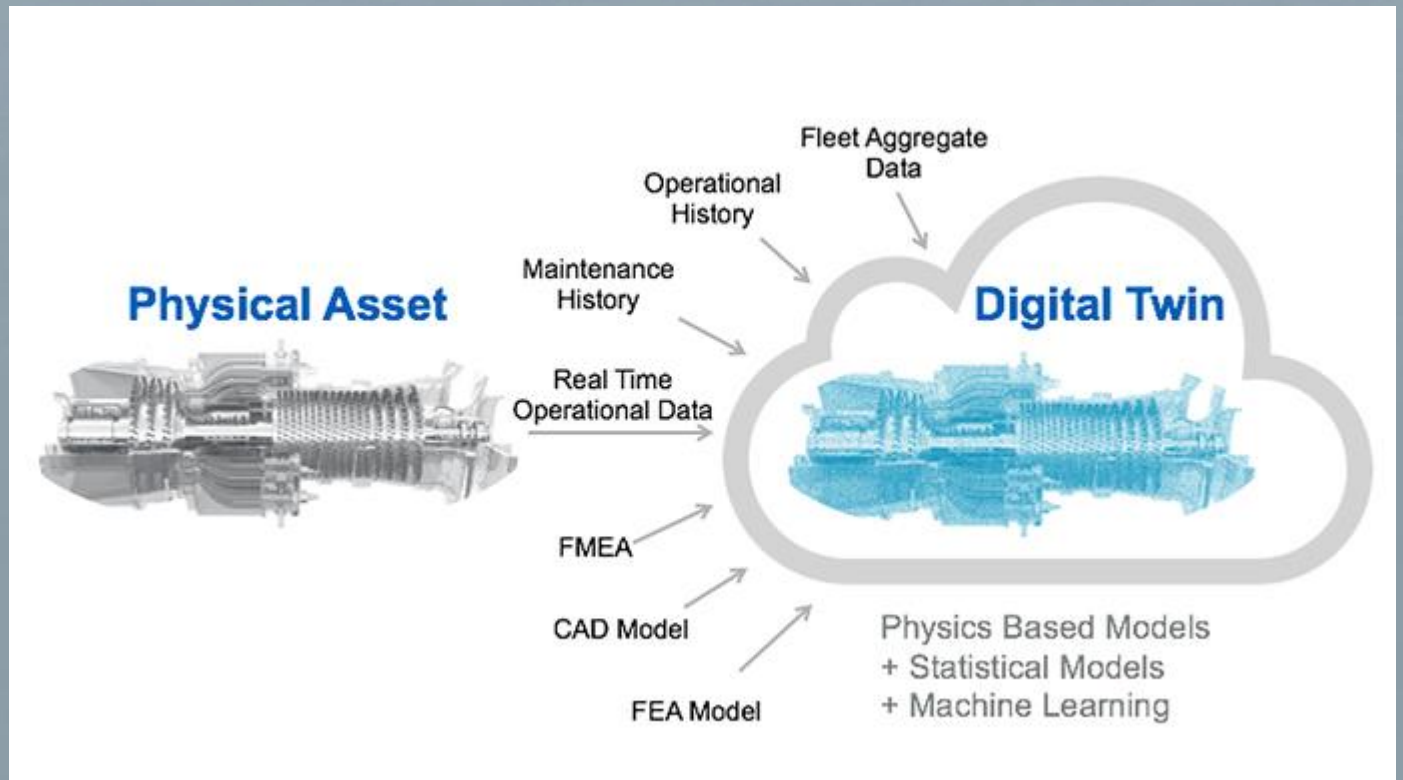

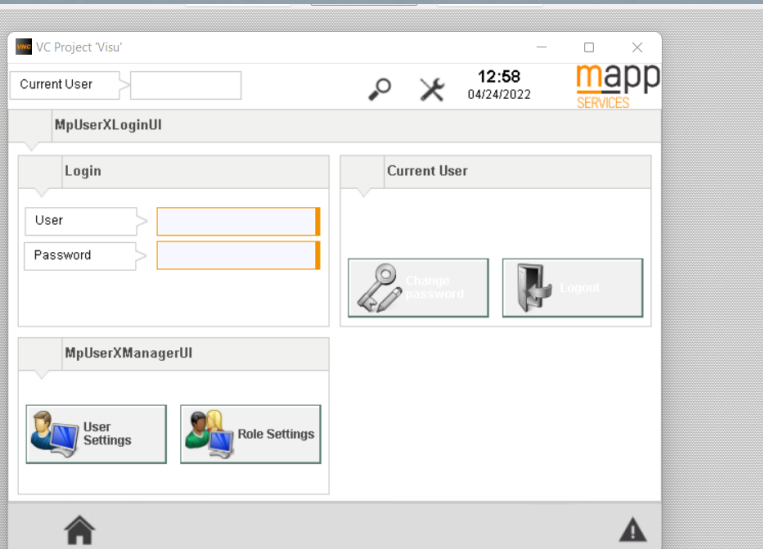

Simulation and Control

- ◆ Utilized industrialPhysics and Automation Studio for realistic simulation.
- ◆ Successfully integrated sensor inputs and actuator outputs.
- ◆ Designed an intuitive HMI screen for operator control.

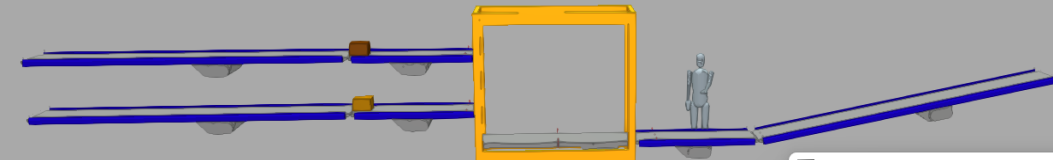

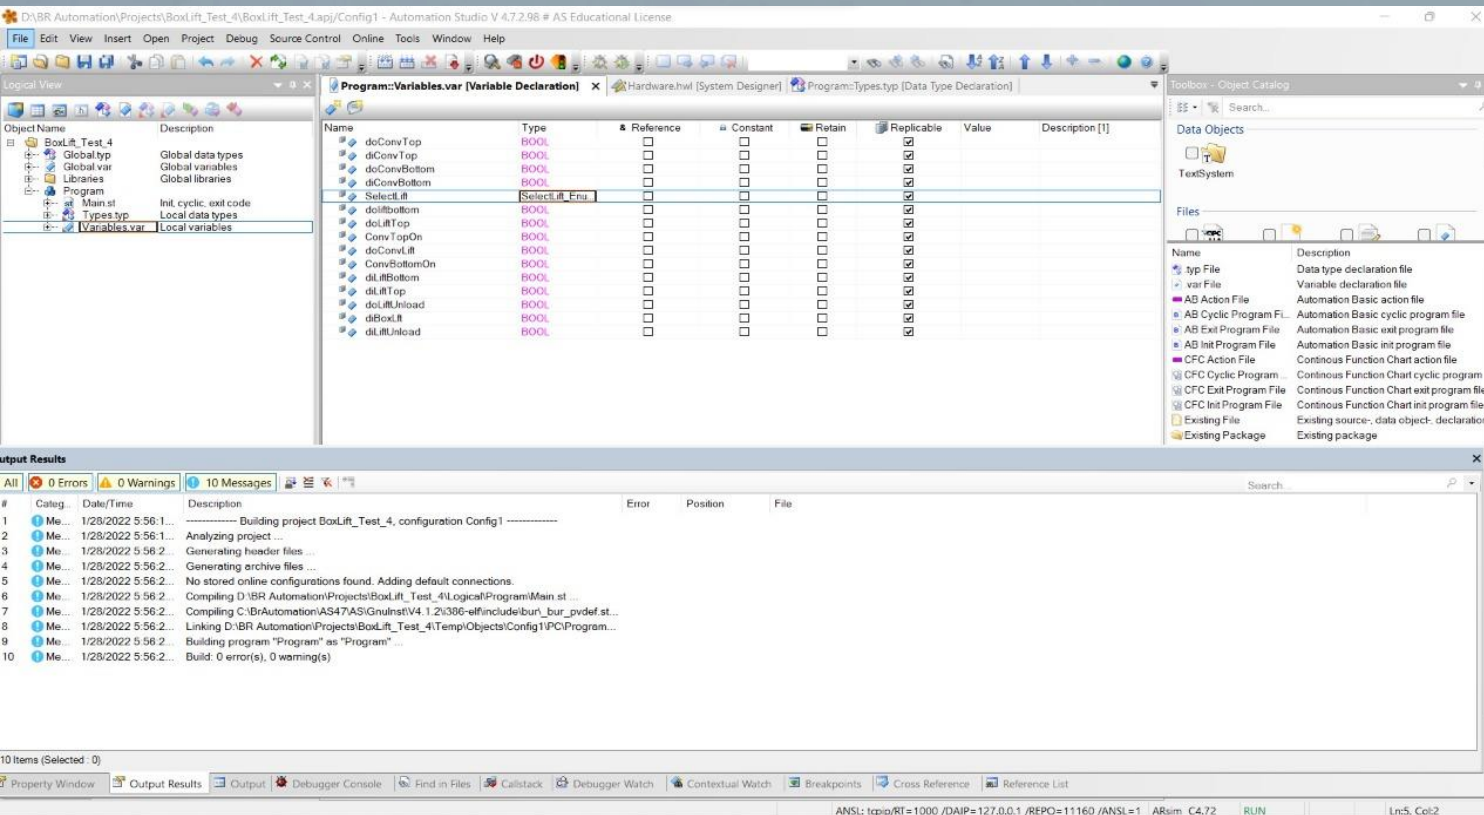

Optimization and Efficiency

- ◇ Optimized conveyor and lift operations for reduced wait times and increased throughput.
- ◇ Implemented digital twin technologies for proactive maintenance and real-time adjustments.

Achievements

- ❖ Coordinated software and hardware components for seamless system operation.
- ❖ Addressed integration challenges to ensure smooth functionality.
- ❖ Contributed to significant improvements in box transportation efficiency.

The background is a teal-colored image featuring a low-angle view of several skyscrapers reaching towards the sky. A white double-lined diamond shape is centered over the image. The text "Thank you" is written in a white, serif font across the middle of the diamond.

Thank you
